

# ICON

W H E E L C H A I R S

***“When I first sat in an ICON wheelchair, I was surprised to find how comfortable and easy-going this chair really is. Now, when I try my old fixed frame rigid wheelchair, I cannot believe how I could ever be without the air-suspension. I also love to be able to adjust the wheelchair after my needs instead of my needs after the wheelchair. I can even change the angle of my back-rest within seconds to find immediate comfort.”***

- Keld Mathiesen, Spinal Cord Injury

### **ICON - One chair fits all!**

The human body posture is under constant changing and new needs arise. This applies especially for active wheelchair users. Having a wheelchair that is fully adjusted at all times is important for optimal performance, and to prevent poor seating conditions causing unnecessary deterioration of the body.

The ICON is a light-weight fixed frame wheelchair that is fully adjustable in almost every possible parameter and in which the user can grow and adapt according to changed demands. The one and same wheelchair can even fit both children and adults – that’s how adjustable it really is!

Developed in a cooperation between active wheelchair users and a leading mountain bike manufacturer, ICON offers outstanding functionality as well as comfort. The build-in air-suspension effectively absorb Whole Body Vibrations, which is inflicted upon the user all day long under normal daily activities being an active wheelchair user. The ICON is developed to protect against those vibrations causing secondary injuries. Try passing a curb – you will feel the difference!

#### **ICON is adjustable in:**

Seat height – front and back	Length/depth of the foot rest
Seat width	Seat angle
Seat depth	Position of the front wheels
Balance point	Back-rest angle
Cambring	Firmness of the air-suspension
